

At Chesterton Community Sports College the Technology department is regarded as an ‘outstanding’ department with an innovative and creative curriculum. The department is well resourced, with a wide range of equipment available to students in the areas of Food, Graphics, Resistant Materials, Textiles and Electronics. The classrooms, workshops and food room create an effective learning environment through the display of student’s work, learning walls and well organised equipment. The department delivers practical lessons which are sharp and focused.

The three teachers within the department set challenging goals based upon the ability of the individual students - modifying and adapting tasks to meet their needs. Two full-time technicians support the teaching staff in the technology department: one in food and textiles and other in graphics and resistant materials. Their assistance is invaluable in supporting the practical nature of the department.
